A Unique ID by the public water system for each service line.								Water systems must track addresses of all service lines in their internal inventory. For the publicly accessible version, location identifiers are required for lead and galvanized requiring replacement. If the system does not use addresses for their location identifier, other options could include GPS coordinates, landmark, intersection, block, or other details to specify service line locations.								If "Non-Lead Other", describe in Comments field

									Was Material Ever Previously Lead?	Service Line Installation Date			Describe the Field Verification Method	Enter the Date of Field Verification				Describe the Field Verification Method	Enter the Date of Field Verification
A Unique ID by the public water system for each service line.								Water systems must track addresses of all service lines in their internal inventory. For the publicly accessible version, location identifiers are required for lead and galvanized replacement. If the system does not use addresses for their location identifier, other options could include GPS coordinates, landmark, intersection, block, or other details to specify service line locations.								If "Non-Lead Other", describe in Comments field			
								Important for determining if service line requires replacement		Estimated date when the service line was installed or replaced		Select option from drop down list. If "Other", describe in the Notes field						Estimated date of field verification or date that the record was updated

A Unique ID by the public water system for each service line. Water systems must track addresses of all service lines in their internal inventory. For the publicly accessible version, location identifiers are required for lead and galvanized replacement. If the system does not use addresses for their location identifier, other options could include GPS coordinates, landmark, intersection, block, or other details to specify service line locations.
